

The wind energy utilization is at high growth rates one of the most dynamic industries worldwide. Our engineering office develops rotor blades and other components for wind turbines for international customers including the supervision of the related certification process of those components. The transfer of technology for the supporting of local manufacturing is part of our job as well. To support our team we are looking for:

- Engineers for structural design and analysis of rotor blades
- Engineers for load calculation
- Engineers for the programming of controller software
- Engineers for the system integration of main components

Besides a degree in engineering we expect you to be able to work by yourself, to speak fluently English and German, and - if possible - experience in one of the fields mentioned above. For business trips you need to hold an unrestricted passport.

We offer the opportunity to work on technological challenging projects in an expanding organization and an adequate payment.

Please send us your full application including your expected salary and the earliest possible time to join the team.
